

The Worm Box

Municipal Worm Composter

Reduce Costs with On-Site Composting:

As the cost of trash collection increases, the benefits to on-site composting are increasing. Many governments hire trucks to pick up their citizen's food and paper waste. Large-scale use of the Worm Box, a composter that residents can use in their own homes, reduces the need for large collection operations.

Easy to Manage:

The Worm Box is simple to operate. When full, each tray weighs only 12.5 pounds, making lifting and arranging trays effortless. The multi-tray upward migration design allows worms to sort themselves. The included 16-page instruction manual makes setup fast and easy and gives detailed tips on managing your Worm Box year-round. Eliminate classes and seminars by providing this easy to use system that thousands of individuals have used successfully.

Quality Compost:

The Worm Box uses worms to convert kitchen scraps, junk mail and other organic material into nutrient rich compost. Master Gardeners agree, worm castings are considered some of the highest quality compost available. Residents using the Worm Box can reduce their waste while also gaining a valuable resource in return.
